

*Does your child see well ?*

Visual defects can be assessed as early as 3 months of age. Visual assessment is recommended for all infants around the 9th month of age and is imperative if the infant shows any sign of abnormality.

TROPIQUE is the partner of

[www.tropique.fr](http://www.tropique.fr)

*Many ocular anomalies, like a lazy eye or misalignment (strabismus) are minimal and may not be observed by the parents.*

**By 3 years of age, it is late to initiate the most efficient treatment. It is crucial that the child enters schools with optimal sight.**

## **Landmarks in visual development :**

*The new-born can distinguish the face of an adult. It is common that new-borns seem to squint during the first few week.*

*By 2-3 months the baby can gaze steadily and follow moving objects.*

*By 4-5 months the toddler reaches for objects.*

*By 6 months visuomoto capacities improve and depth is well perceived.*

*During the following months, the infant develops the use of vision to manipulate small and nearby objects.*

*By 5 years of age, vision is virtually adult-like, but the best use of it is still in progress.*

## ***Causes to raise parent's concern :***

- *Occasional or permanent cross-eye,*
- *Excessive mimics or winking,*
- *Eye don't point straight-ahead in frontal gaze,*
- *Child is born very premature or very small,*
- *The parents wear glasses.*

*In many cases, parents may not detect a visual defect or a lazy eye.*

## ***What can be done ?***

**C***onsult an eye specialist before the child is over one year.*

*Some visual defects need correction as early as 4 months of age. Opticians carry specially adapted frames for children, stylish, study and comfortable, "Sur Mesure Tropicque".*

*Poor sight needs attention and sometimes remediation before the child enters school.*
